Test equipment for magnetic fields

Article number	Comment
MagFeldFolie	Film for magnetisation display
MagFeldSens-E	Electronic pole tester

Visualise magnetic fields effortlessly with our flux detector foil. Simply place the foil on the magnet and the areas with high magnetic flux density become visible. This gives you a quick and easy insight into the magnetisation pattern, pole distribution and flux density of the magnet.

Use the electronic magnetic pole tester to display the south or north pole of a magnet. The pole tester indicates the north pole with a red LED and the south pole with a green LED. It is suitable for various magnetic materials.
